Introducing Solveg

Like most iris growers, we too have been bitten by the hybridizing bug. The disease is chronic but not usually fatal. It's a lot of fun and for the most part harmless even if slightly boring to one's friends who have different hobbies So, we modestly but proudly present not twenty-five, not twelve, not even five or six new introductions but just

SOLVEG—a seedling of Siegfried by Mme Louis Aureau. A good-sized well formed iris of clear clean lemon yellow with a pronounced white area on the falls and a matching lemon yellow beard with the last hairs just barely tipped white. The flowers look very fragile but the substance is good, blooms withstood three days of heat and wind and were the coolest looking things in the garden. We had wanted to call is Lemon Ice as the name described it so perfectly—it was tentatively so named—but the name proved to be unavailable. But it does describe the iris perfectly. About thirty four inches tall with five blooms to the stalk. Standars are full and rounded, nicely ruffled, falls semi-flaring. Absolutely no haft markings or venations even in years when many other iris were badly flecked . . . We have tried not to let parental pride run away with us on this—we have grown and bloomed this iris three years and have checked it carefully with the best of its color class that we could find. Last year it was planted in a square flanked by Berkeley Gold, Spun Gold and Ola Kala. It compared very favorably with the others in general quality, size, height and beauty. It grows vigorously, increases rapidly, seems completely hardy, and blooms generously. It is as good a performer as we have in our garden. We have watched its growth and performance for three years and feel it rates introduction even in an over-crowded field. Our garden visitors were all drawn to it, iris fans and people who knew nothing about iris were alike enthusiastic about it. So here it is and we feel it is a great bargain at\$10.00 net.

FOREWORD

Again a most sincere greeting to old friends and new from the Red river valley. Iris time is coming on apace as we write these words; the winter was a bit rugged, but snow covering was fairly adequate and with our own supplement of rye straw brought the iris thru nicely. A blessed soaking rain has just fallen to end the driest April on record and the iris are fairly jumping out of their beds. It looks like an early and gratifying season coming up.

We list in the following pages a carefully selected and thoroughly tested assortment of iris, the best of both the old and the new as fast as we can try them out for hardiness and satisfactory performance. If you haven't grown Siberians and Spurias try a few varieties, you will be delighted with their possibilities for cutting and floral arrangements and for landscaping. They are not difficult to grow if their few simple requirements are understood. Cultural directions are given on the appropriate pages.

Now, as to terms and conditions of sale. We require payment in full with your order and we do appreciate postal notes and money orders in preference to personal checks; bank charges have a way of nibbling away at the profits. We pay postage on all orders of \$3.00 or more; we will fill smaller orders for bearded iris but must require 25c toward postage and packing costs. If you wish only a few iris perhaps a friend would add her order to yours to make one shipment. We start digging July 15th and ship bearded iris thru July and August, beardless iris (Siberians and Spurias) in September. We make no spring shipments. All orders will be acknowledged. Iris are guaranteed to be well-grown, free from disease and true to name. No substitution of varieties without your express permission . . . If you are not familiar with iris varieties and wish us to choose for you we will be happy to do so — send us any amount above the minimum required and specify your color preferences if any and we will do our level best to please you.

North Dakota customers please add sales tax.

TREASURE ISLAND—An extremely well liked clean golden yellow flower of great size with a touch of white on the falls. An exquisite thing35		

BEARDLESS IRIS and MISCELLANEOUS

SIBERIANS — SPURIAS

Plant beardless iris at least 2 inches apart. They do best in a moist location altho they do tolerate average garden conditions. Frequent division is unnecessary, clumps may be left undisturbed for several years. Well rotted manure is a good fertilizer for these species. Plant at once upon receipt of order and water well.

SIBERIANS

AMELIA EARHEART—A medium violet blue with horizontal falls	\$.75
BLUE CHARM—A large light blue of intense coloring	.50
BLUE HERON—This is a favorite with us. It is such a lovely shade of medium blue and has the poise of a bird	.75
BLUE STAR—A large and tall deep blue with star shaped flowers	.50
CAESAR—Very dark blue purple. Very well liked by everyone	.35
EMPEROR—A beautiful iris with deep blue violet flowers	.35
KINGFISHER BLUE — Another lovely but rather suggestive of the equally lovely blue Heron	.50
LLEWELLYN—A tall and upstanding sort with large flaring flowers of blue purple	.60
MISS DULUTH—A tall rich deep blue by Sass	.50
MOUNTAIN LAKE—A delightfully clear medium blue with flaring ruffled falls. Very crisp and cool in effect	\$1.50

MRS. A. W. TAIT—Lovely porcelain blue, a lusty grower and early	.50; 3 for \$1.00
PREMIER—A new stylish flower of rounded form in tones of blue. Does exceptionally well	\$1.00
SUNNY DAY—A tall rich golden yellow, one of the finest	\$1.50
DOROTHEA K. WILIAMSON—Not a spuria actually, rather a hybrid of fulva but similar in some respects and with the same requirements. Needs a lot of water. Oh, yes, its' a gorgeous velvety purple that is exquisite for corsages. The ladies love it for that	.50
PSEUDACORUS — Another non-spuria. Likes wet feet too. Has interesting foliage and a curious way of growing. Yellow flowers rather like spuria blooms. Try it, you might like it	.50

Cultural Directions for Bearded Iris

Plant in a sunny well-drained location, not crowded by other plants or shrubs. The rhizome or fleshy part of the iris should be covered with about a half inch of soil, roots well spread and ground firmly packed about them. Where winters are severe as they are here we recommend a covering of hay or straw the first year; this helps prevent heaving due to alternate freezing and thawing; a frequent cause of winter losses. Divide every third year to prevent overcrowding, another cause of loss as well as inferior bloom.

HEMEROCALLIS (DAY LILIES)

We have only a few day lilies to offer this year, perhaps more next year. These few are very satisfactory sorts. Shipment with the beardless iris.

FLORHAM—A very nice easily growing day lily of soft yellow with nicely flared and slightly twisted petals..... .50

KWANSO—The ever popular double form. In great demand..... .50

THUNBERGI—A pale lemon yellow with rather fine foliage. Stays open into the evening..... .50

DICTAMUS (GAS PLANTS)

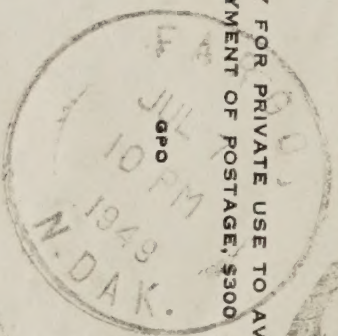

This little known yet well loved and meritorious plant deserves a choice spot in every perennial planting. It is extremely hardy and long lived, its one weakness a dislike of transplanting. So put it where you want it and leave it alone, it will delight you for many years . . . Its common name derives from the gas which it gives off which will sometimes ignite when a match is held near on a still evening. The foliage is clean and attractive, the plant full and bushy as is a peony, the roots long and heavy. Strong flower spikes rise above the cut foliage bearing showy pink flowers with deeper veining. Likes a strong rich soil in full sun where it may grow undisturbed. Shipped with beardless iris and day lilies..... .60
